TAUGHT"

About Us

City Labs Inc. Is the community resource that fosters programs to increase participation in STEM Competitions locally and nationally. While improving students in pursuing careers within Science Technology Engineering and Math (STEM) we teach skill sets of addressing Problems, Building Goals, Applying Solutions and Managing Projects.

Our Missions

DRONE RACING EXHIBIT

The drone racing exhibit is a great way for kids to learn about aeronautics. Kids receive information on the fundamentals of flight and Bernoulli's principle. In addition to using our drone flight simulators. Our flight simulators give kids an aeronautical view of what it is like flying as a pilot. Once they have completed the simulators kids get to fly one of our drones through the racing obstacle course. This challenging course is a great way to use what they learned to master the course.

STEM SEMINARS

City Labs Inc host a variety of seminars throughout the year. Our most requested seminar is our Science Fair Guidance Seminar. This consists of an informational section for parents. As well as provide students with assistance on project management skills needed to complete their project on time. Kids are given several materials to assist them and provides them with an opportunity to work amongst their peers.

FISHING COMPETITION

This is our largest and most requested fundraiser event every year. We hold a pre-event that allows kids to learn all about fishing. They can learn about the various types of fish, depths of water, and the perfect bait to you. Following this event, it leads to our big tournament. Adults can fish in teams of two and win some pretty amazing prizes.

COMPTIA CERTIFICATION CLASSES

Our CompTIA Certification classes are a great way for adults to obtain technical knowledge. All while gaining knowledge for a career change or career advancement in your current role. We offer the CompTIA A+ and CompTIA Network plus classes. A different class is held each quarter and last four a total of 4-6 weeks.
